

Liquid Metering System

From crude oil to cryogenic ethylene to caustic liquids; offshore to portable solutions, 2 to 42 inches liquid services – WOOJIN has the knowledge, people and facilities to meet your project needs.

We can help whatever your liquid fiscal/custody transfer or allocation metering requirements are. Our project group is dedicated to understanding the latest standards and technologies to meet modern demands for liquid metering. We consistently deliver high accuracy liquid metering, proving, master metering and calibration packages – it's our business.

We have worked with all metering technologies including turbine, Coriolis, ultrasonic and PD meters. We can carefully integrate all of your requirements to provide you with a total solution incorporating the following: sampling and analysis (water cut, density, viscosity, vapor pressure, composition); proving and calibration needs (bi-directional ball prover, compact prover, master meter prover, water draw calibration systems); metering control and supervisory systems.
