

Metering Supervisory System (MSS)

We understand the importance of a control system and we have integrated hundreds into the metering skids that we have provided along with more as separate projects. A control system must be comprehensive, reliable and workable. Over the years we have delivered all types of control systems from simple, stand-alone computers to sophisticated panels offering the latest technologies and interfaces. We can interface into any 3rd party supervisory or SCADA system, integrate PLCs and engineer redundancy into a system to meet your needs. Our solutions will meet all of your system requirements including the following:

Comprehensive, reliable and workable control system solutions
A choice of flow computer technology

- RTUs
- Supervisory systems and HMIs
- Dual redundancy
- Fully wired and tested panels
- Flexible reporting
- Serial and Ethernet connectivity
- IO interfaces – e.g. analogue/HART
- Secure, remote web access
- Easy integration into DCS
- System integration with skid
- Witness testing
- Commissioning
- Operator training
- System upgrades
- Computer systems are fully integrated and tested alongside your complete metering system

Supervisory Systems

WOOJIN has a great deal of experience in implementing a variety of supervisory system technologies and architectures. Our knowledge and experience in this area led us to create our own supervisory system. We are happy to work with you to advise and engineer the solution that best suits your needs and client preferences.
